

Description

The T-30CMII Ramp Test Set is designed for one man operation of the VOR, MB, GS, LOC, flight director, and autopilot from the cockpit or flight deck.

The unit functions by radiating controllable RF signals directly into the aircraft's antennas. The unit will permit compliance with CAT III periodic ramp check certification.

The T-30CMII is simple and straightforward in operation and functions primarily as a "go/no go" test set. The T-30CMII provides test capability to insure primary navigation instruments are functional and meet their required accuracies.
